CAPTIVA AC / SOLID MDF DOOR COLLECTION

CAPTIVA

CAPTIVA CUSTOM DOORS ARE SYNONYMOUS WITH QUALITY MATERIAL AND CRAFTSMANSHIP. WITH NORTH ATLANTIC'S PARTNERSHIP WITH ARCHITECTURAL CONCEPTS, WE HAVE EXPANDED OUR PRODUCT LINE TO INCLUDE A HIGH-QUALITY SOLID MDF DOOR AS AN ALTERNATIVE TO ALL-WOOD OR MDF-SKIN INTERIOR DOORS. ALLOW YOURSELF TO BE CAPTIVATED WITH CAPTIVA AC, OUR NEW LINE OF CUSTOM INTERIOR SOLID MDF DOORS.

ARCHITECTURAL CONCEPTS (AC) WAS FOUNDED IN 2007 BY SCOTT COLBY AND JOSH MORGAN. THEIR BREADTH OF EXPERIENCE COMES FROM DIFFERENT BUILDING PRODUCT MARKET SECTORS, PROVIDING BROAD-BASED, IN-HOUSE EXPERTISE IN THE COMMERCIAL ARENA, WITH CORE INSIGHT ON DOORS, FRAMES, HARDWARE, ARCHITECTURAL METALS, SHOWER ENCLOSURES AND GLAZING PRODUCTS.

What is the right door for the opening?

We understand the different needs of every door opening. We'll help you recognize issues of durability for those high traffic areas, considerations of functionality for the given space, and the style demanded by your design and the aesthetics of the environment.

MDF

MDF (Medium Density Fiberboard) is a smart choice for many of your interior door needs. Not only are MDF doors stable, durable and environmentally friendly, but our super-refined MDF doors provide a remarkably smooth finish and outperform natural wood doors for painted applications.

Because of their homogeneous construction, MDF doors are more durable and resist warping, cracking and splitting. MDF allows us to build more stable and architecturally correct doors and details.

MDF is an engineered wood product made from recycled and recovered wood fiber. Rest assured, we do not fill our MDF products with cheaper core materials (like many alternatives), and we never use low-density fiberboard.

All our MDF is CARB2* compliant and NAUF** MDF is available on request.

* California Air Resources Board

** No Added Urea Formaldehyde Medium Density Fiberboard

Superior structural wood edge

MDF holds screws well through the face, but not as well through the edge. We have worked diligently on designing a wood edge that provides a complete glue bond, without any gaps, increasing the structural rigidity of the door. Our wood edge will accept all of your hardware with ease.

V-GROOVE

From panel doors to barn doors, the wide selection available from Captiva AC is sure to match your design vision and bring high-quality craftsmanship to your space.

Stile & rail

Captiva AC stile and rail doors allow us to craft virtually any style of door while bringing a high level of craftsmanship and quality to our clients. With meticulous construction and the use of premium materials (that exceed industry standards), these stile and rail doors provide sharper corners, better depth and more stability than other comparable doors.

Primer

Captiva AC uses a high end, high build, WDMA primer on all our doors. This is an acrylic latex primer intended for priming interior and approved exterior MDF and composite substrates. This product dries fast, sands easily and will fill open grain woods and MDF with little or no fiber raise. Works with any type of topcoat: Latex, Oil, Acrylic and Lacquer.

Machining

With state of the art CNC Machinery, doors can be prepped for any type of hardware.

Prefinished top coat

We can prefinish your MDF door with our unique, waterborne Polyurethane and Acrylic topcoat. As a value-added service, this waterborne sealant is designed for use as a self-sealing topcoat. A strong build providing a durable finish with very good hardness and chemical resistance compared to traditional acrylic latex and Nitrocellulose finishes.

Our topcoat meets or exceeds KCMA test requirements for finishes and is low VOC and UL GREENGUARD Gold Certified for low chemical emissions. We can accommodate all gloss ranges and can be toned to almost any color. Please ask your customer service representative for more information on pricing and lead times.

Square Sticking (SS)

F Panel (F)

Panel doors

The distinctive look of every panel door is in the profile. The door profile is defined by the joints where the sticking and panels come together and the styles of each. Choose from over 45 combinations of sticking and panel styles to achieve the perfect profile look for your project, or we can help you create a custom solution.

Each of our panel doors are built with authentic stile-and-rail construction for architecturally correct results. You can choose from diverse panel door styles in configurations from one to nine panels.

Square Sticking (SS)
Flat Panel (F)
Custom plant on Moldings

Sticking options

Sticking is the pattern cut into the interior edges of every stile and rail – and is an essential component in your door's overall style. Stiles and rails are the vertical and horizontal wood pieces that create the frame of a panel door.

L100
False Louver

Louver door collection

Our striking louver doors provide not only unique style options, from traditional plantation style to coastal contemporary, but also serve a functional purpose as well, by offering both privacy and the airflow needed for certain rooms and spaces. Our louver panels are available in both vented and false configurations and can be added to most of our panel doors.

Custom flush doors

Our flush modern doors offer a sturdy, functional option for certain applications and aesthetic needs. Every one of our flush doors is engineered to resist warping and twisting. You can select from a wide variety of wood species or paint grade MDF to finish out your flush door. Depending on the size, most of our flush doors can be quite heavy. To reduce the weight, you can choose to add a tubular core, which reduces the weight but maintains the structural stability. For extremely large doors, inquire about our aluminum honeycomb construction.

AC STC Ratings

Sound Transmission Class (STC) Rating for Doors determines how successful it will be at blocking the movement of sound. Architectural Concepts MDF Doors are initially a good sound reducer, however, the door is just one piece of the equation. It is important to use the proper acoustical gasketing combinations to seal the gaps around the perimeter of the door opening. The gasketing combinations we list below, when tested with our doors, achieved a zero drop-off in our STC rating. Ultimately, the hardware gasketing and perimeter sealing determine the sound rating that a door achieves.

Our MDF Doors have been tested with hardware packages from National Guard Products in the following chart. All of these ratings are for operable single swing doors with the sound control hardware specified on the right-hand side of the table.

STC Ratings

Door Styles	STC Rating	Door Thickness	National Guard Products (NGP) Hardware Used:		
			Primary Seal	Threshold Saddle	Door Bottom
A100 - A200 Square Sticking (SS) Flat panel (F)	32	1-3/4"	5050 Twin Row	8144 (optional)	12T6
A100 - A200 Square Sticking (SS) Raised panel (R)	34		-or-	-or-	-or-
